Transferable Skills Course

Good Scientific Practice

Prof. Dr. Reinhard X. Fischer*, Prof. Dr. Dierk Hebbeln**, Dr. Christina Klose**

** Ombudsperson for the Natural Sciences at the University of Bremen*
***MARUM – Center for Marine Environmental Sciences, University of Bremen*

18 January 2018

Objectives

Good scientific practice, also referred to as research integrity, is essential in all scientific work. It ensures respectful cooperation among scientists and credibility towards the public. The principles of good scientific practice can be violated in many ways. From deliberate falsification or deceit to a lack of care in the application of scientific methods or data handling and documentation.

This course will provide an overview over the background of the topic by giving examples of scientific misconduct and explaining the rules of good scientific practice. It will provide examples of undeliberate misconduct and of 'grey zones' and how to handle them. Participants will have the opportunity to ask questions and discuss their doubts with the lecturers and fellow scientists.

Topics include

- Popular cases of scientific misconduct / history of dealing with the topic 'good scientific practice'
- The DFG 'Rules of Procedure for Dealing with Scientific Misconduct'
- Ombudspersons
- Examples of undeliberate falsification of data
- Authorship
- Images and intellectual property rights
