

Bremer Kamingespräche Meeres- und Klimawissenschaften

Bremen Fireside Chats Marine and Climate Sciences

17 November 2015

18.00 – Bremer Presse-Club, Schnoor 27/28, 28195 Bremen

Sanja Asendorf

MARUM / GLOMAR alumni, marine environmental scientist, application specialist at Thermo Fisher Scientific

Sanja graduated in Marine Environmental Sciences at the Carl von Ossietzky-University of Oldenburg, Germany in 2011. Her master project was about the geochemistry of Antarctic sediments and pore waters in regard to global climate changes within the past century. After another scientific project in Antarctica in the 2011/2012 season, Sanja started a PhD at MARUM (Center for Marine Environmental Sciences, Bremen, Germany) where she investigated human induced coastal changes within the past millennium.

Because she realized that the work as a PhD student didn't suit her, she decided to quit after one year. This opened her the possibility to apply for a promising job position at Thermo Fisher Scientific, one of the world's biggest suppliers of laboratory applications.

In April 2014, Sanja joined Thermo Fisher Scientific as an Application Specialist for ICP-OES. There she executes different tasks, for example supporting customers in their everyday questions regarding applications and software, preparing marketing material or giving customer presentations and trainings.
