18.00 – Bremer Presse-Club, Schnoor 27/28, 28195 Bremen

Antje Buss

consultant in building physics

Antje studied physics at the university of Bremen and graduated 2011 with her master thesis in physical oceanography about plume dispersal of hydrothermal vent fields in the North-West Pacific. Then she started with her PhD Project at the university of Bremen about upwelling in the Weddell Sea. After working on the project for two years, she realised that she does not want to focus on an academic career in her life and started out looking for jobs in industries.

Since October 2014 Antje is working as a consultant in building physics at AM Ingenieur Consult in Hamburg. The small company is mainly doing structural engineering calculation and her part is everything that has to do with the physics of buildings. That includes calculations and consulting in all terms of heat insulation and acoustic protection of new and old buildings.
